DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-10,17,25-27,29-39 are rejected under 35 U.S.C. 102(e) as being anticipated by Bourne'997.

The applied prior art teaches the claimed composition comprising an embolic particle comprising a shape memory material, wherein the particle is generally spherical.

See summary of the invention, column 1 lines 45-67, column 2, lines 1-25, column 3, lines 18-28.

See column 6 lines 16-58, for teachings of the claimed composition and specifically, the description of the shape memory material. Column 7, lines 9-23 teaches the particles having different sizes. Column 8, lines 33-67, teaches the claimed shape memory polymers and gelling precursors. Column 11, lines 43-46 relates to embolization. Column 13, lines 44-60 teaches hydrogel compositions. Column 14, lines 1-67 teaches additional elements claimed by applicants such as contrasting agents, radiopaque agents, therapeutic agents, alloys and others. It is also noted that the applied reference teaches composition comprising a plurality of embolic particles.

The arguments submitted by applicants in their last response have been fully considered. The previous rejections are hereby withdrawn and inconvenience to applicants is regretted.

Claims remain unpatentable in view of the newly discovered prior art reference.
